

Asbestos Abatement Techniques

Course Duration: 3 Day

Who should attend?

This training program has been designed to meet the requirements of the Provincial Asbestos Abatement Regulations. Supervisors and workers involved with asbestos abatement projects are required to complete asbestos abatement training. The training course is designed with classroom lecture/discussion and practical exercises to provide potential asbestos workers with the skills and information necessary to work safely and effectively while handling asbestos.

Curriculum Topics include:

- Asbestos Personal Protection Equipment and Uses
- Friable and Non-Friable Products
- Friable Sprayed Products used in Buildings
- Insulation used on Mechanical Systems
- Health Officials – Occupational and Non-Occupational Regulations
- Classifications of Asbestos Type I, II and III
- Respiratory Protection and Selection
- Respiratory Maintenance Program
- Respirator Fit Testing and Use
- Hands-on Training (glove-bag methods and small enclosure)
